GitHub: [Cezart3](#)
LinkedIn: [tocaciu-cezar](#)

SKILLS

Languages
Python, Java, TypeScript, SQL, C++

Backend
FastAPI, SQLAlchemy, REST APIs,
web scraping, regex

Testing
pytest, Vitest

Databases
MySQL, SQLite

Frontend & desktop
React, Tailwind, Java Swing

Data & ML
pandas, NumPy, scikit-learn,
XGBoost

Tools
Git, GitHub, Claude Code (agents,
skills, hooks)

Learning on real projects
Kotlin Multiplatform, Unity, C#

LANGUAGES

Romanian — Native
English — Fluent

DETAILS

Born 31 August 2004
Nationality: Romanian

PROFILE

Fourth-year Computer Science student at UTCN, looking for a software engineering internship. I like finishing things: a rental aggregator with a public demo, a Chrome extension with 400+ tests, desktop software a manufacturer uses every day, and open-source work merged by its maintainer. I build a lot of it with AI coding agents, and I treat their output the way a reviewer would: I read the diffs, gate merges on tests, and write down what has not been checked.

EDUCATION

Technical University of Cluj-Napoca (UTCN) Oct 2023 – Present
BSc Computer Science · fourth year

PROJECTS

Kira — Rental Aggregator for Romania [kira-imobiliare.vercel.app](#)
Python · FastAPI · SQLAlchemy · SQLite · React · TypeScript · pytest

- Collects listings from 5 property sites and adds filters none of them offer: heating type, parking, walking time to your faculty.
- Rule-based parser for free-form Romanian ad text; FastAPI backend with ~70 tests, rate limiting and an SSRF-safe image proxy.

Escape With Your Friends — Online Co-op Game in progress · Steam planned
Unity · C# · FishNet · Steamworks · Claude Code

- Four-player game networked peer-to-peer over Steam with no servers; the host decides damage, money and every random roll, so clients cannot cheat.
- Ran it like a small team with AI agents writing the code: 185 tracked issues, 136 merged pull requests in five weeks, ~70 automated headless tests, performance measured on low-end hardware.

RankUp — Chrome Extension public on GitHub
TypeScript · React · WebAssembly · Web Workers · Vitest

- Analyses opponents' recorded CS2 matches in the browser (Rust parser compiled to WebAssembly, run on a worker pool) and maps where each player usually stands. No backend.
- 400+ tests; paid features are locked behind a type that only one function can open, so forgetting a check is a compile error.

Unlost in Translation — Open-Source Contribution project by Radu Marias
Kotlin Multiplatform · Compose · Ktor · WebSockets

- Contributor: helped restructure a single-module Android app into a multiplatform project that also runs in the browser; 20+ pull requests reviewed and merged by the maintainer.
- Built end-to-end encrypted two-phone conversations and ran a security audit that found an API key leaking through request URLs.

Shower Configurator — Client Desktop App in daily use
Java · Swing · MySQL

- Replaced a spreadsheet at a shower-cabin manufacturer: guides the sale, builds the bill of materials, prices it at the live BNR rate and exports a PDF quote.
- Admin panel lets the business update products and prices without a developer.

Trading System with an ML Filter demo account
Python · XGBoost · scikit-learn · pandas · pytest

- End-to-end Python system running live: data pipeline, model training and validation, desktop GUI, and a test that blocks deployment if live inputs differ from training ones.
