SKILLS

Programming

Python, Java

Databases

MySQL

Machine Learning & Data

XGBoost, Pandas, Scikit-Learn

Tools & Libraries

MetaTrader 5 API, CustomTkinter

LANGUAGES

Romanian — Native

English — Fluent

DETAILS

Born 31 August 2004
Nationality: Romanian

PROFILE

Third-year Computer Science student at the Technical University of Cluj-Napoca, focused on software development and machine learning. I've built complete applications in both Python and Java, ranging from a desktop configurator that a real client now uses day to day, to a multi-strategy algorithmic trading system built around predictive models (XGBoost). I like working through difficult problems and writing code that's scalable and maintainable.

EDUCATION

Technical University of Cluj-Napoca (UTCN)

Oct 2023 – Present

BSc Computer Science · Currently in third year

PROJECTS

Shower Configurator — Desktop Application

Java · MySQL · Desktop application

- Built a desktop application from scratch to digitize the shower-cabin configuration process; it has been validated and is now in active use by a real client.
- Implemented the backend logic and a relational database that automatically generate valid configurations from the components the user selects.

Algorithmic Trading Framework — Machine Learning

Python · XGBoost · Pandas · Scikit-Learn · MetaTrader 5 API · CustomTkinter

- Designed a modular, multi-strategy engine (e.g. ORB, SMC) that runs trades concurrently through APIs on MetaTrader 5 and NinjaTrader.
- Built a complete data pipeline (data harvesting plus feature engineering with 20+ metrics) to predict market direction and filter out false signals.
- Validated every model strictly out-of-sample to avoid look-ahead bias, and built a custom GUI together with a risk-management engine based on prop-firm rules.
